

## Challenge 1

Phaethon (phaet@IASTATE.edu)--Just in case u need it and need to know who ur talking 2 BTW its probbably best to use alice as your subject so its easier for me to find

Create a world in alice that is unique and new. Try and use various models from different catagories. Your goal is to learn about world creation and inspire the imagination of others. What could be happening in the scene? What are the characteristics that will draw others to it. What is out of the ordinary? And Most Importantly... does anyone know where I put the ingredients for the fudge??? Ok I finished the fudge but thats not important. If you need inspiration look at the world around you. What do you see? Can you add a random shark eating someone? Or, would you like to reverse the pull of gravity on an object? Would you like to Add ppl coming out of the sewer system only to be knocked back down by a fish to the head? The possibilities are endless. If you want to make a couple you can even amimate them later. Send Me some and Ill check to see if we can get some running to show at the next ICN session, anonymous or not we want to see your projects. Ill try and send back something unique of my own if you would like. Run amuk, Let your thinking bring about chaos and disaster, Bring ruin to all those around you, but please, please keep it limited to a programmed world. After all outsmarting the computer just isnt as fun if you cant outsmart, aggrevate, annoy, and destroy those arround you in the process. OK time for a most nutritious lunch of buttered popcorn and hot cocoa with a possible dessert of brownies topped with fudge, peacons and marshmallows all smothered in caramel.
