

Linux Commands Cheat Sheet

Take some time to define what each of the following commands do, how to use them, and ways to remember them. Look back at the Module 4 slides or the internet if it doesn't quite make sense.

tree:

pwd:

ls:

cd:

rmdir:

cp:

mv:

touch:

history:

locate:

mkdir:

less/more:

man:

cat:

ps:

kill:

clear:

More Tips and Tricks:

- In most cases, if you observe any errors after installing a new program or making a “big” change your system. It is likely that the system needs to be rebooted and updated for the changes to be officially applied. To reboot use **sudo reboot** and to update **sudo apt update**.
