

December - Challenge

Using JSON with the color sensor

Input color, output to LED

Challenge:

- Take everything we have learned so far and make the RVR read a color swatch, and change the color of the LEDs to that swatch.
 - Example- The RVR is sitting on something green, your program should run and change LED colors to green
- Hint: We will be using what we learned from our RVR JSON lesson and applying it to our first challenge where we modified LED colors.
